                              "NEDO human cDNA sequencing project.";

Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.

-I-FUNCTION: Macrophage-restricted adhesion molecule that mediates sialic-acid dependent binding to lymphocytes, including granulocytes, monocytes, natural killer cells, B-cells and CD8 T cells. Preferentially binds to alpha2,3-linked sialic acid (By similarity). Binds to SPM/CD43 on T-cells (By similarity). May play a role in hemopoiesis.

-I-SUBCELLULAR LOCATION: Type I membrane protein (isoform 1) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDIIND=2.00.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note=No experimental confirmation available;
TISSUE SPECIFICITY: Expressed by macrophages in various tissues.
High levels are found in spleen, lymph node, perivascular macrophages in brain and lower levels in bone marrow, liver kupffer cells and lamina propria of colon and lung. Also express further tries by inflammatory macrophages in rheumatoid arthritis.
SIMILARITY: BELONGS TO THE IMMUNOGLOBULIN SUPERFAMILY. SIGLEC (SIALIC ACID BINDING IG-LIKE LECTIN) SUBBRANILY.
SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
SIMILARITY: Contains 1 immunoglobulin-like (2-type domains).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGER) in mammals particularly humans. The method involves treating the mammals with humanised VEGER monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is humanised antibody murine heavy chain hypervariable region (VH) CDR-2 used in the exemplification of the invention.
Treating or controlling an angiogenic dependent condition (e.g. neoplasm, collagen-vascular or autoimmune disease) in mammal by administering a combination of an antiangiogenic molecule and a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          angiogenic dependent condition in a mammal, especially a human.

The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent preventing significant toxicity of the chemotherapeutic agent and is especially molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, ovarian carcinoma, neuroblastoma colon carcinoma prostate carcinoma, neuroblastoma multiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

light chain constant domain (CL domain), and P2 has an antigen-binding
site located to the N terminus of the CHI domain. (I) is useful for:
neutralising the activation of a vascular endothelial growth factor
(VEGF) receptor; reducing tumour growth; inhibiting angiogenesis;
reducing endothelial cell proliferation; inhibiting angiogenesis;
reducing endothelial cells; blocking interaction of a protein and
its ligand; promoting interactions between immune cells and target cells;
and in vivo and in vitro for investigative, diagnostic or treatment
methods. The design of (I) provides for efficient production so that
substantially all of the antigen-binding proteins production so that
the desired configuration. (I) is bivalent and bispecific, homogeneous
and in tetrameric form. The heavy chain constant domains which constitute
the Fc region (e.g., CH2 and CH3 for an IgG molecule) of a natural
antibody and which provide other antibody functions can be present. There
is no requirement for processing in vitro to obtain the complete product.
This peptide sequence represents the heavy chain variable domain
complementarity determining region H2 (CDRH3) version #2 incorporated
into an antigen-binding represents in he method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cytostatic; antibody; antigen binding site; leukaemia cell; vascular endothelial growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ABJ26728;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABJ26728 standard; Peptide; 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an antigen-binding protein (I) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an
                            New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse peptide relating to the bispecific antibodies that bind to the VEGF receptors of the invention.
                      growth factor receptor (VEGFR) in mammals particularly humans. The method involves treating the mammals with humansised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic hymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to
                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method for inhibiting the growth of non-solid tumour cells that are stimulated by a ligand of vascular endothelial growth factor receptor (VEGFR) in mammals particularly humans. The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Inhibiting growth of non-solid tumor cells useful to treat bone marrow tumors such as leukemias or multiple myeloma comprises treatment with an antagonist of a vascular endothelial growth factor receptor -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric -

The invention relates generally to a method of treating or a controlling an angiogenic dependent condition by administering an angiogenic dependent condition by administering an angiogenic dependent condition by administering and a chemotherapeutic agent, to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, central nervous eystem tumour, neuroblastoma, central nervous eystem tumour, neuroblastoma, glioblastoma multiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        anti-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimising or preventing significant toxicity of the mentherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2002-106189/14.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               <u>.</u>
```

The invention describes an antigen-binding protein (1) comprising a complex of two polypeptides (P1) and two second polypeptides (P2) which are stably associated in an immunoglobulin like complex. P1 has an antigen-binding site located to the N terminus of immunoglobulin (Ig) light chain constant domain (CI domain), and P2 has an antigen-binding site located to the N terminus of the CH1 domain (I) is useful for: neutralising the activation of a vascular endothelial growth factor

receptor;

reducing tumour

growth;

angiogenesis;

Claim 61; Page 60; 64pp; English.

New bispecific immunoglobulin-like antigen-binding protein tumour growth and for inhibiting angiogenesis, comprises a

for reducing complex of

two polypeptides and two second polypeptides

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 methods. The design of (I) provides for efficient production so that substantially all of the antigen-binding proteins produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the Fc region (e.g., CH2 and CH3 for an Igg molecule) of a natural antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a heavy chain variable domain (VH) incorporated into Fv, an engineered protein containing a heavy chain variable domain and a light chain variable domain in one polypeptide chain, described in the method of the invention.
The invention relates to a novel antibody having a first antigen bind site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Mus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cytostatic; antibody; antigen binding site; VEGF receptor; mitogenesis; leukaemia cell; vascular endothelial growth factor; tumour; bispecific antigen-binding protein; mouse; murine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 migration of human leukaemia cells; blocking interaction of a protein its ligand; promoting interactions between immune cells and target count in vivo and in vitro for investigative, diagnostic or treatment methods. ```

for investigative and

diagnostic

The present invention relates to novel immur to kinase insert domain-containing receptor mouse foetal liver kinase (FLK)-1 receptor)

vascular endothelial

growth

factor

immunoglobulin molecules that eptor (KDR) (a human homologue ptor) with an affinity comparat actor (VEGF) and that neutralis

an affinity comparable

Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR plC11 scFv antibody heavy chain variable region (VH).
                                                                                                                                                                                                                      WO200174296-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    involves treating the mammals with humanised VEGFR monoclonal antibodies (antagonists). Humanised monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse variable region contains mouse complementarity determining region (CDR) grafted into human variable region. The method is usefull for treating leukaemias such as acute or chronic myelocytic leukaemia, acute or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is chimeric plCl1 heavy chain fragment which is used for the construction of chimeric plCl1 IgG expression vector. Chimeric plCl1 heavy chain contains cloned domain (CH) and human IgG1 (gamma) heavy chain contains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Chimeric

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1C11. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, ovarian carcinoma, glioblastoma multiforme or melanoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of the heavy chain variable region (IMC-IC11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibor or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or
                                                                                                                                                                                                         Human; tumour; vascular endothelial growth factor receptor; metastasis; epidermal growth factor receptor; non-small cell lung carcinoma; NSCLC; breast; VEGFR; heart; EGFR; therapy; invasiveness; heavy chain; VH.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (C) (NEGFR) antagonists in combination with radiation, chemotherapeutic agent, or epidermal growth factor receptor (EGFR) antagonists. The method is useful for inhibiting tumour growth in a human, where the tumour (e.g. tumour of the breast, heart, lung, small intestine, colon, spleen, bone, ckidney, bladder, head and neck, ovary, prostate, brain, pancreas, skin, colon earrow, blood, thymus, uterus, testicles, cervix or liver) over cexpresses VEGFR. It is also useful for inhibiting growth of colon tumour or non-small cell lung carcinoma (NSCLC) and tumour overexpressing EGFR. CC is preferably useful for treating subjects with both solid tumours, preferably high vascular tumours and non-solid tumours. The inhibition or reduction of tumour includes prevention or inhibition of the corresponding to the progression of tumours includes the invasiveness, metastasis, recurrence and increase in size of the tumour. The present sequence is created to illustrate the progression of the match of the tumour. This sequence

Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is KDR binding immunoglobulin related

                                                                                                                                                                                                                                                                                                                                                                                    Antigen-binding protein; single chain variable fragment; svFv, cytostatic; angiogenesis inhibitor; tumour; leukaemia; antibod vascular endothelial growth factor receptor; VEGF;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel immunoglobulin molecules that bind to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FLK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VEGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting the activation of KDR, for reducing tumour growth and for inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                 Antigen-binding

CC complex of two polypeptides (P1) and two second polypeptides (P2) which CC are stably associated in an immunoglobulin like complex. P1 has an CC antigen-binding site located to the N terminus of immunoglobulin (Ig) CC light chain constant domain (CL domain), and P2 has an antigen-binding CC site located to the N terminus of immunoglobulin (Ig) CC light chain constant domain (CL domain), and P2 has an antigen-binding CC sight chain constant domain (CL domain), and P2 has an antigen-binding CC sight proceed to the N terminus of the CH1 domain. (I) is useful for: CC (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; CC reducing endothelial cell proliferation, inhibiting vEGF induced CC migration of human leukaemia cells; blocking interaction of a protein and CC its ligand; promoting interactions between immune cells and target cells; and in vivo and in vitro for investigative, diagnostic or treatment CC methods. The design of (I) provides for efficient production so that the desired configuration. (I) is bivalent and bispecific, homogeneous can the desired configuration. (I) is bivalent and bispecific, homogeneous can the desired configuration. (I) is bivalent and bispecific, homogeneous can the terameric form. The heavy chain constant domains which constitute the FC region (e.g., CH2 and CH3 for an IgG molecule) of a natural CC is no requirement for processing in vitro to obtain the complete product. (scFv), an engineered protein containing a variable light and variable invertion.
                                                                                                                                                                                    Query Match
